```
Submitted (MAR-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Binding to cells via a high affinity receptor, laminin is thought to mediate the attachment, migration, and organization of cells into tissues during embryonic development by interacting with other extracellular matrix components.
                                                                                                                                              685

SUBUNIT: Laminin is a complex glycoprotein, consisting of three different polypeptide chains (alpha, beta, gamma), which are bound to each other by disulfide bonds into a cross-shaped molecule comprising one long and three short arms with globules at each
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pfam; PF00053; laminin_G5; 6.

"Fission yeast cut5 links nuclear chromatin and M phase regulator in
the replication checkpoint control.";

EMBO J. 13:5319-5329(1994).

-I- FUNCTION: ESSENTIAL COMPONENT FOR DNA REPLICATION AND ALSO THE
CHECKPOINT CONTROL SYSTEM WHICH COUPLES S AND M PHASES. MAY
DIRECTLY OR INDIRECTLY INTERACT WITH CHROMATIN PROTEINS TO FORM
THE COMPLEX REQUIRED FOR THE INITIATION AND/OR PROGRESSION OF DNA
SYNTHESIS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       74 WIPVLYESWVQGED-----LDDGLLVDKHFLPTLFKCRVCLTNIGQPERSRIENYVL 125

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 220, Application US/09764846

Patent No. US20020102638A1

GENERAL INFORMATION:

APPLICANT: Rosen et al.

TITLE OF INVENTION: Nucleic Acids, Proteins, and Antibodies
FILE REFERENCE: PT212

CURRENT APPLICATION NUMBER: US/09/764,846

CURRENT APPLICATION OF EMPLOYER CONSULT PALM OF file wrapper

NUMBER OF SEQ ID NOS: 348

SEQ ID NO 220

LENGTH: 283
